We equip your Test field off.

With test actuators for high accelerations and smallest amplitudes from the manufacturer Herbert Hänoch GmbH & Co. KG from Germany.

Massive test actuators (series 320) for highly dynamic applications with unlimited frequency and very high side loads:
+ Hydrostatic design with throttle gap or Servoseal® on piston
+ Throttle gap design complete or with Servoseal® on piston
+ NEW in complete Servoseal® design

Sleek servo actuator (series 300) for dynamic applications up to approx. 25 Hz, low side loads and long strokes up to 1,500 mm:
+ Throttle gap design complete or with Servoseal® on piston
+ NEW in complete Servoseal® design

The Servoseal® for sealing on the piston or on the piston rod drastically reduces the functional oil flow or leakage. It occurs hardly any friction and it also enables the use of a smaller control valve.
